

Data Manager

I need a database with access to data underpinned by modern technologies

→

so that sustainability is ensured

I need a database that will maintain interoperability with international initiatives.

→

I need a web user interface to ensure ease of access, editing and usability/searchability

→

functional attributes of a tool

Portal

new tool

I need detailed information and with simplified editing functionality which displays appropriate dataset ownership, quality control and auditing mechanisms.

→

I need a FAIR marine monitoring directory with the potential to underpin key current agendas such as healthy seas or climate change/resilience

→

so that I can ensure visibility of UK marine data.

I need to know past present and future plans for marine monitoring.

→

I need a database provided as a spatial services with associated metadata about the type of monitoring/outputs/timeliness of marine monitoring.

→

what monitoring is happening specific metadata information required

new tool

I need to know what where and when marine monitoring are taking place

→

so that our understanding of what datasets could become available can increase and data gaps can be filled.

what monitoring is happening
